## Question 1

A snowflake is released from rest and falls to the ground. There is significant air resistance. Photographs of the snowflake are taken at intervals spaced  $1\,\mathrm{s}$  apart.

Which of the following are true during the illustrated period?

- 1. The snowflake falls with constant speed.
- 2. The snowflake falls with constant non-zero acceleration.
- 3. The snowflake initially falls with constant speed and then accelerates.
- 4. The snowflake initially accelerates and then reaches a constant speed.

## Question 2

Two balls slide along horizontal surfaces. The positions of the balls are recorded at intervals spaced  $1\,\mathrm{s}$  apart. These are illustrated in the diagram.

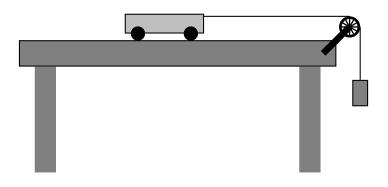

In the interval between  $1\,\mathrm{s}$  and  $5\,\mathrm{s}$ , which of the following is true?

- 1. The net force on each ball is zero.
- 2. The net force on ball A is the same as that on ball B but not zero.
- 3. The net force on ball A is smaller than that on ball B
- 4. The net force on ball A is larger than that on ball B

## Question 3

A cart can slide back and forth along a frictionless track. A string is attached to the cart and a mass is suspended from this. The cart is given a brief initial push and starts moving left. The cart slows down and reverses direction, moving right.

Which of the following is true?

- 1. There is no force on the cart throughout the motion.
- 2. As the cart reverses its speed drops to zero and the force drops to zero.
- 3. As the cart reverses its speed drops to zero and the force never drops to zero.
- 4. There is always a force on the cart and so its speed is never zero.
